Enterprise Architecture with Emerging Technologies (Cloud, IoT, AI, Blockchain)

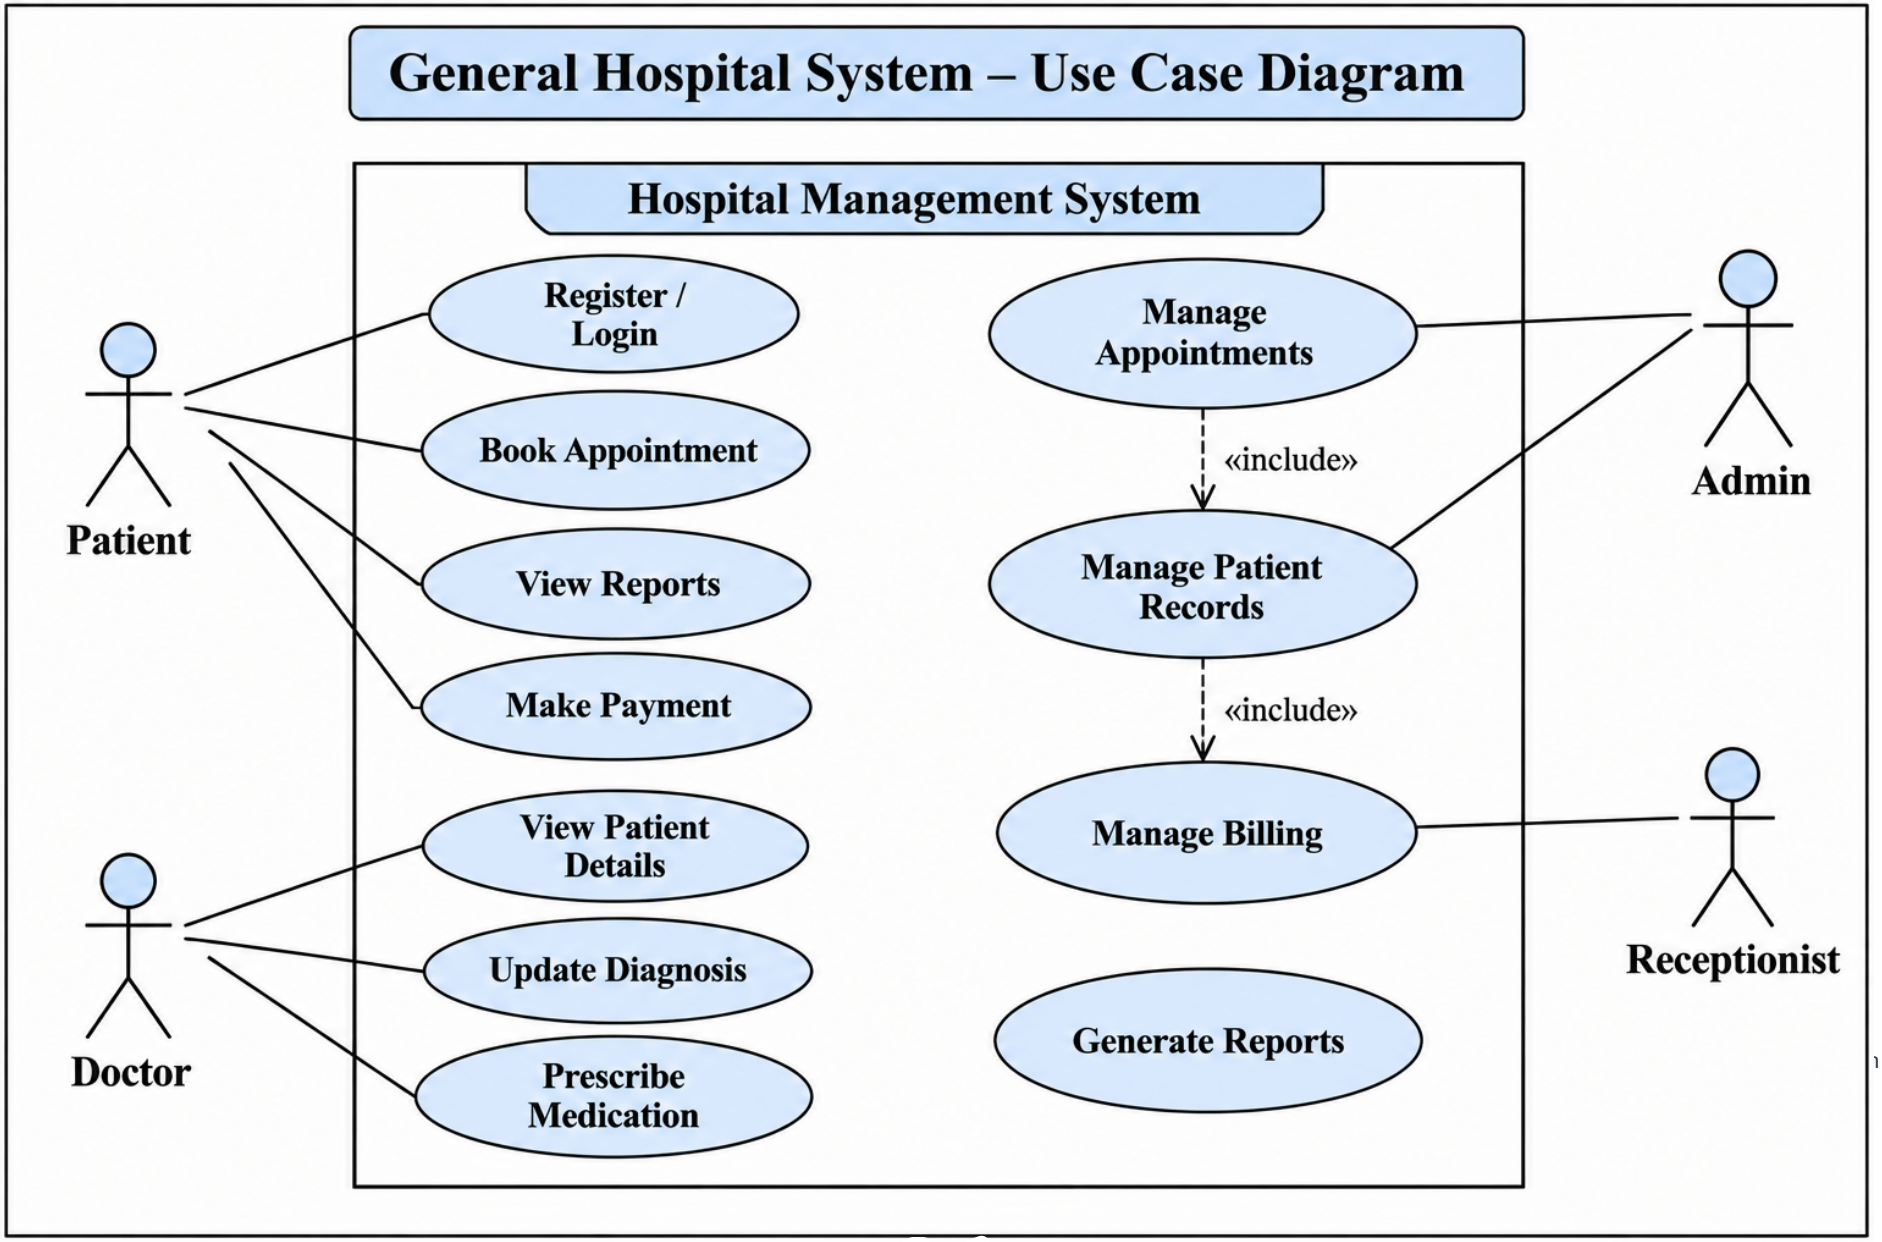

2. DESIGN AND IMPLEMENTATION USING TOGAF FOR HEALTHCARE

TOGAF Architecture Development Method (ADM) applied to a Hospital Information System

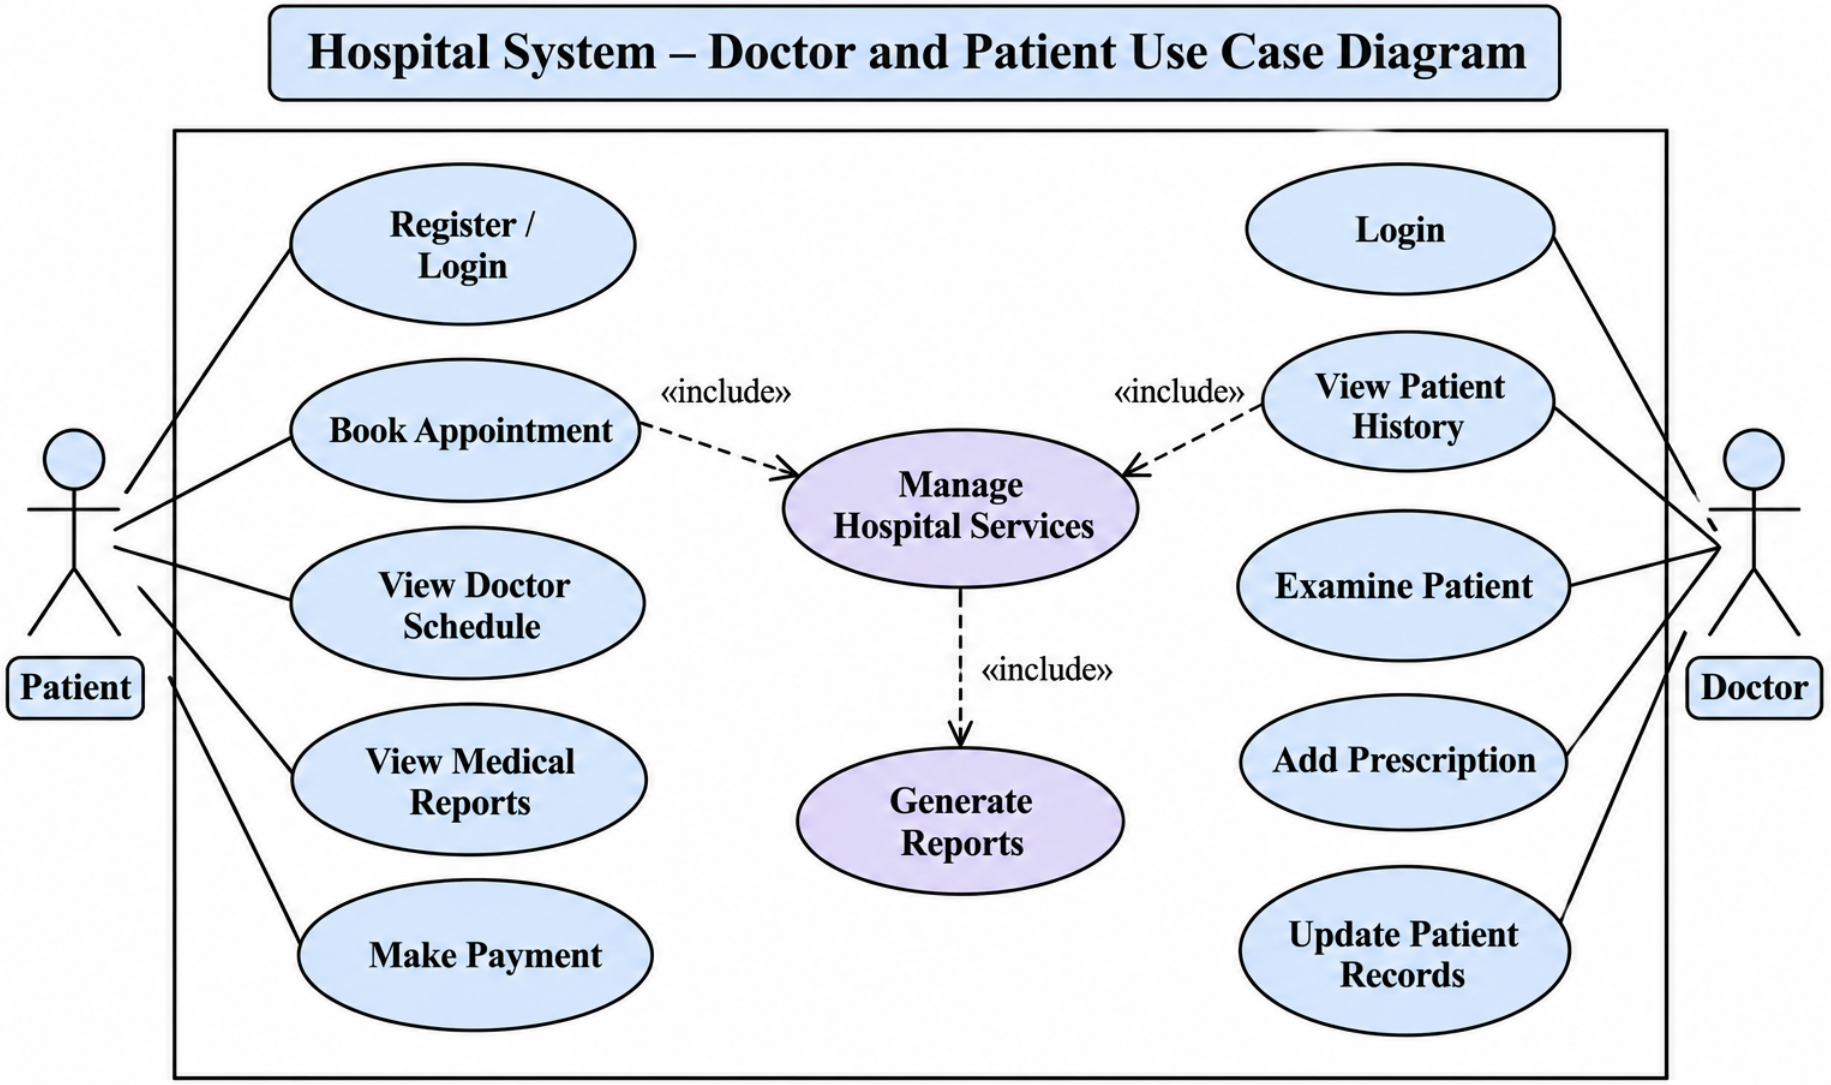

3. USE CASE DIAGRAM – GENERAL HOSPITAL SYSTEM

System boundary contains hospital functions; external actors interact with relevant use cases.

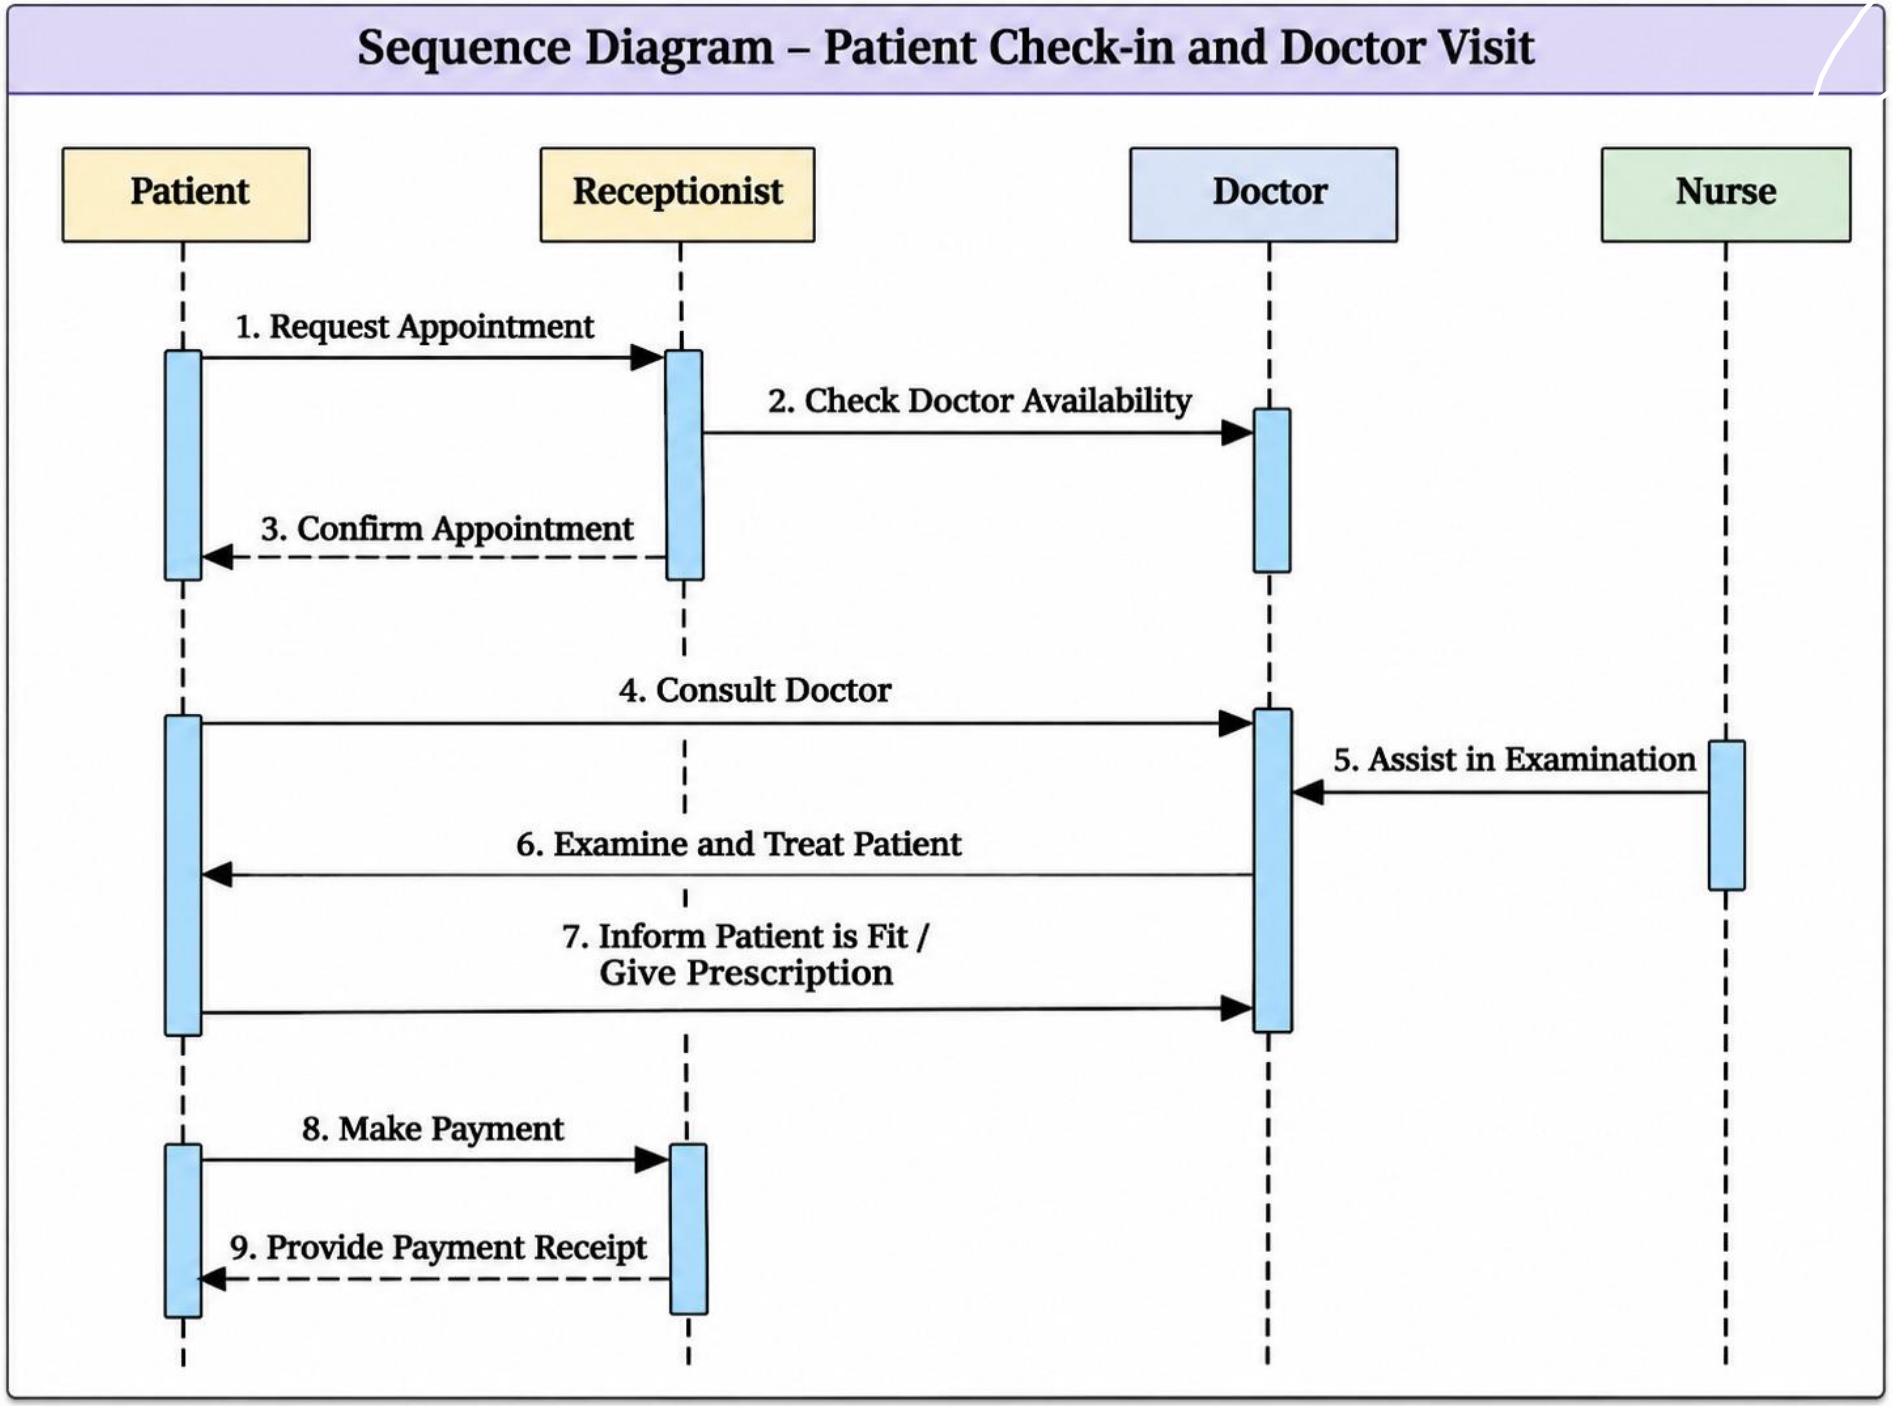

4. USE CASE DIAGRAM – DOCTOR AND PATIENT

Focused view of patient-facing and doctor-facing interactions in a hospital.

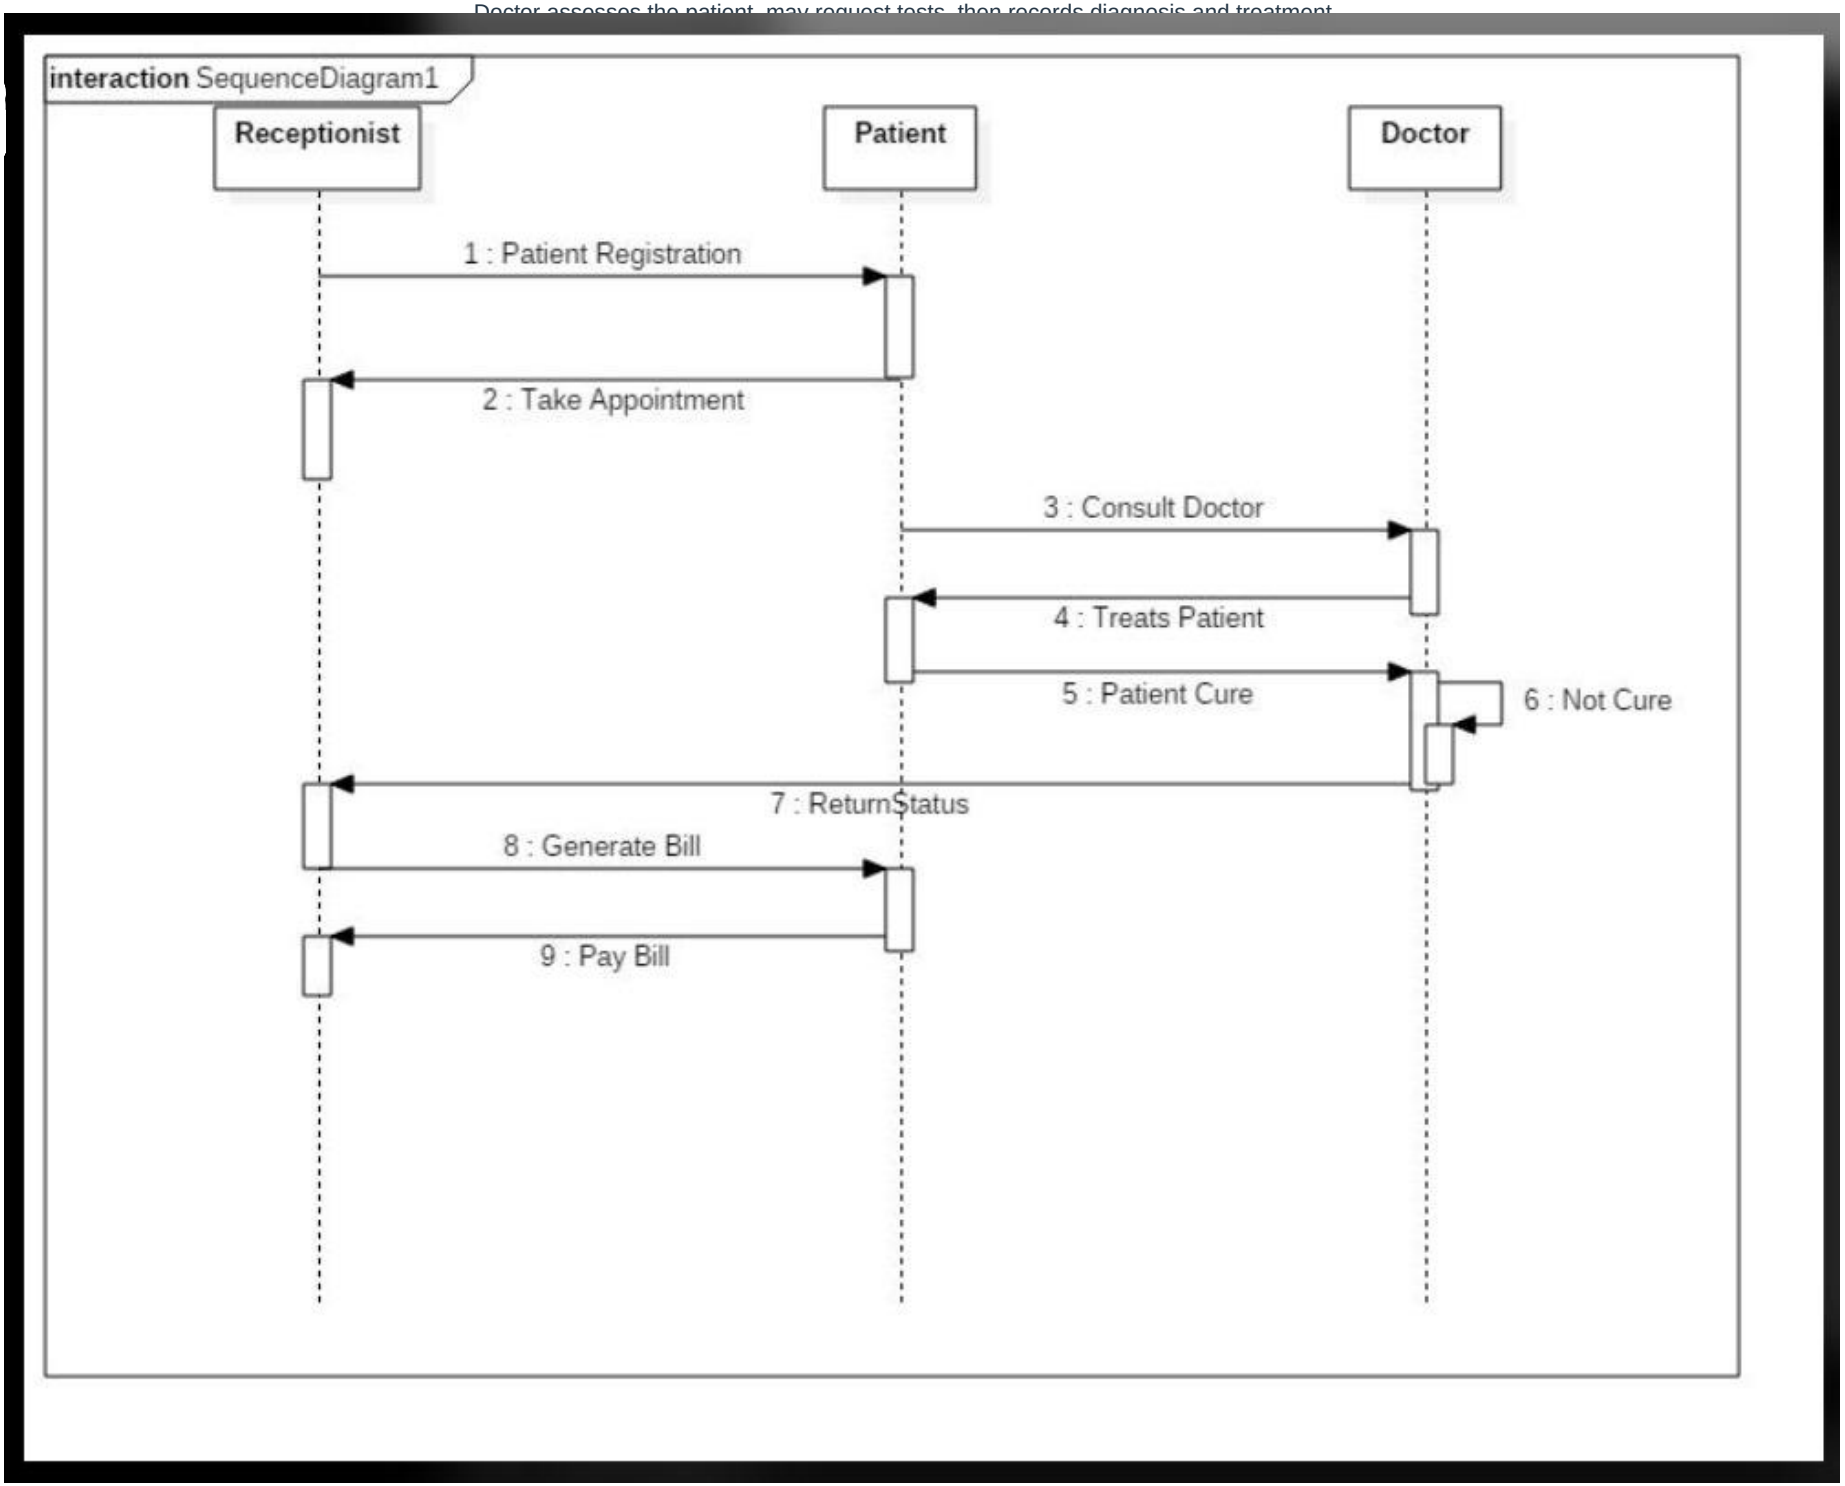

5. SEQUENCE DIAGRAM – PATIENT CHECK-IN AND DOCTOR VISIT

Time flows from top to bottom. Dashed arrows represent responses.

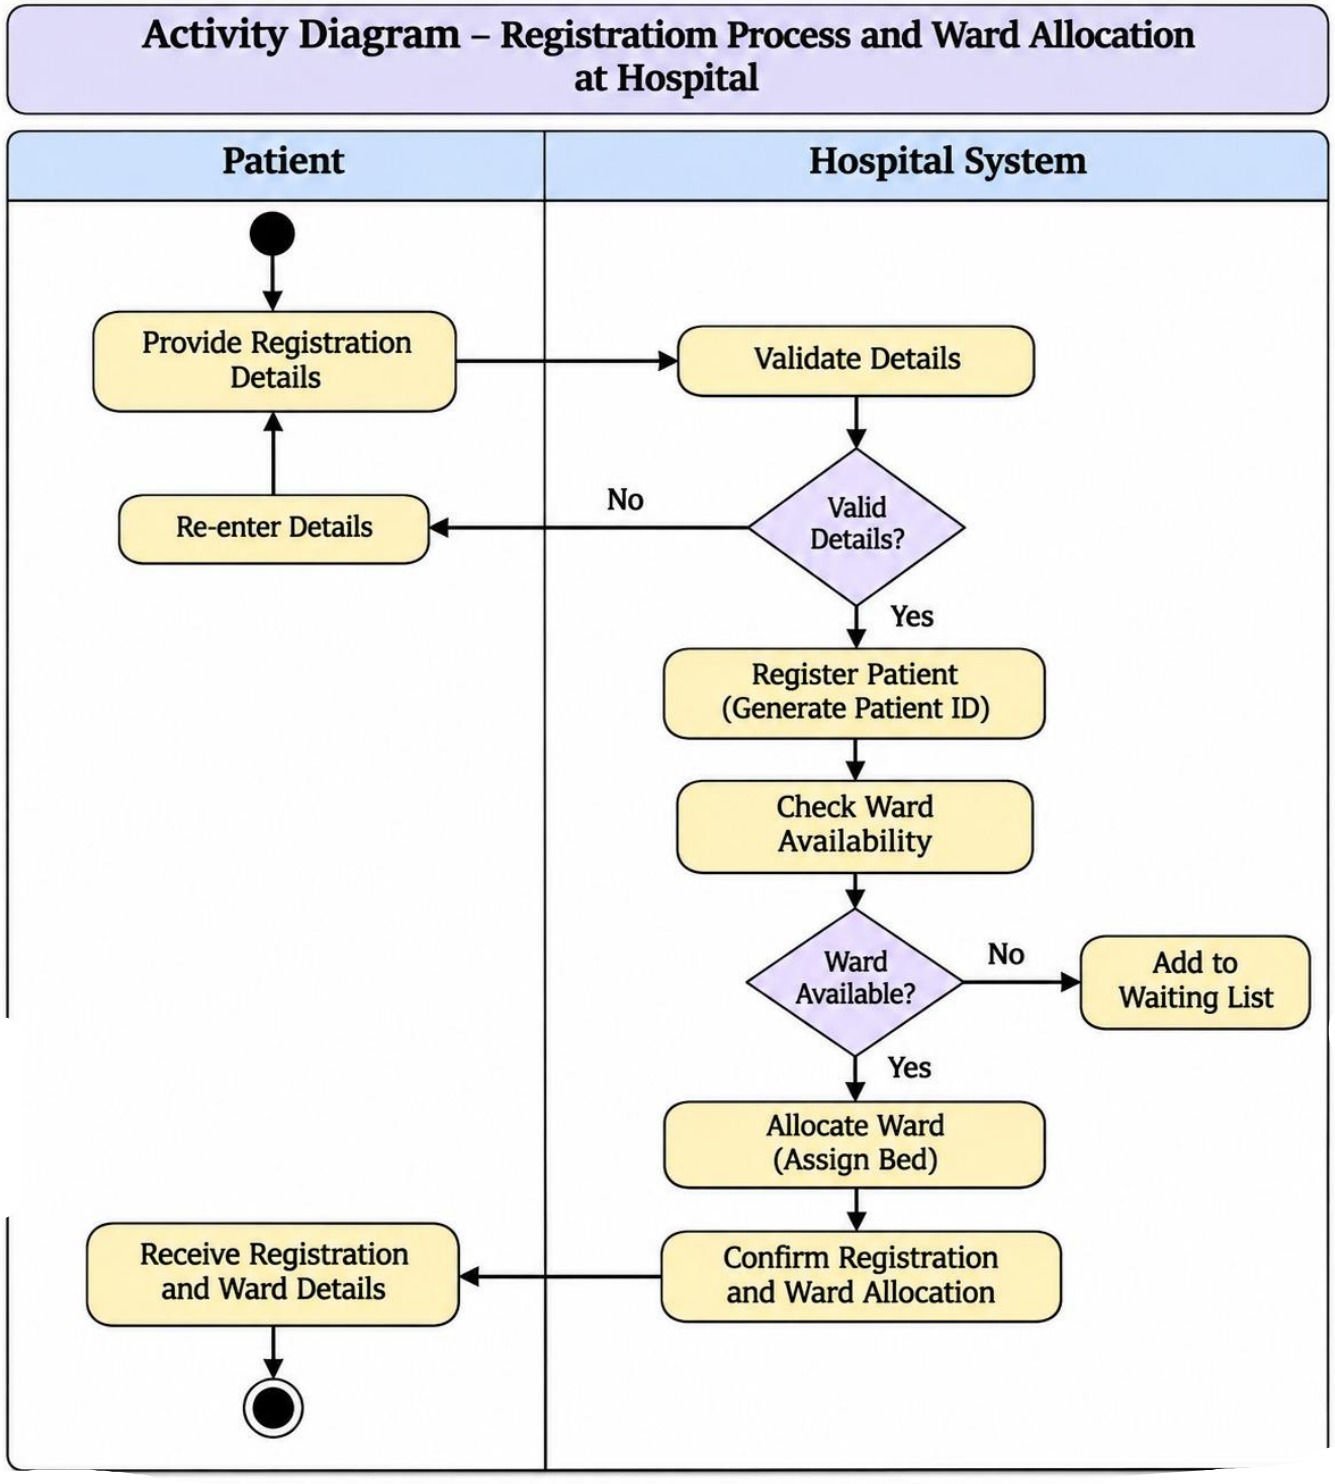

6. SEQUENCE DIAGRAM – PATIENT EXAMINATION

Doctor assesses the patient, may request tests, then records diagnosis and treatment.

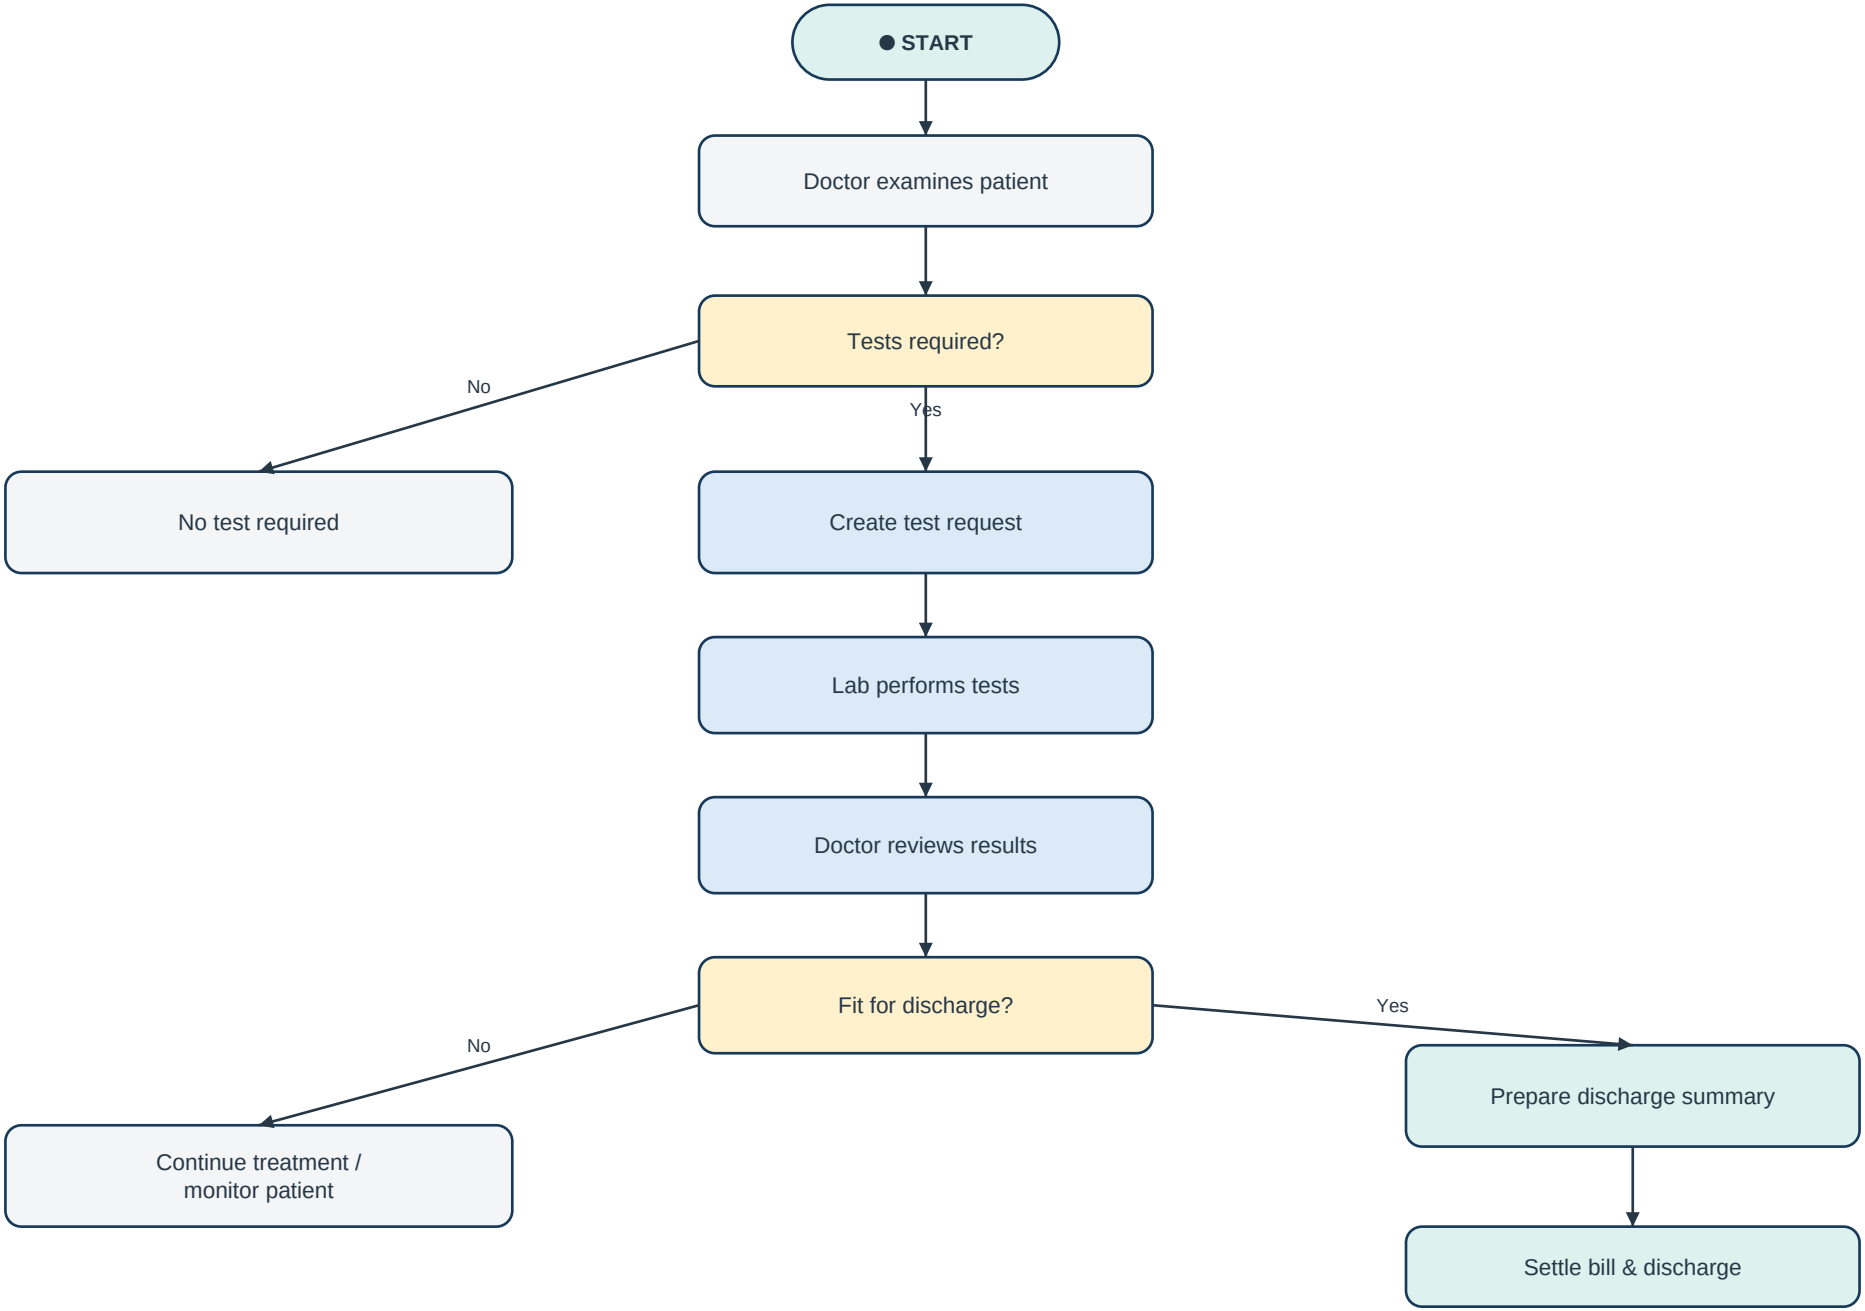

7. ACTIVITY DIAGRAM – REGISTRATION AND WARD ALLOCATION

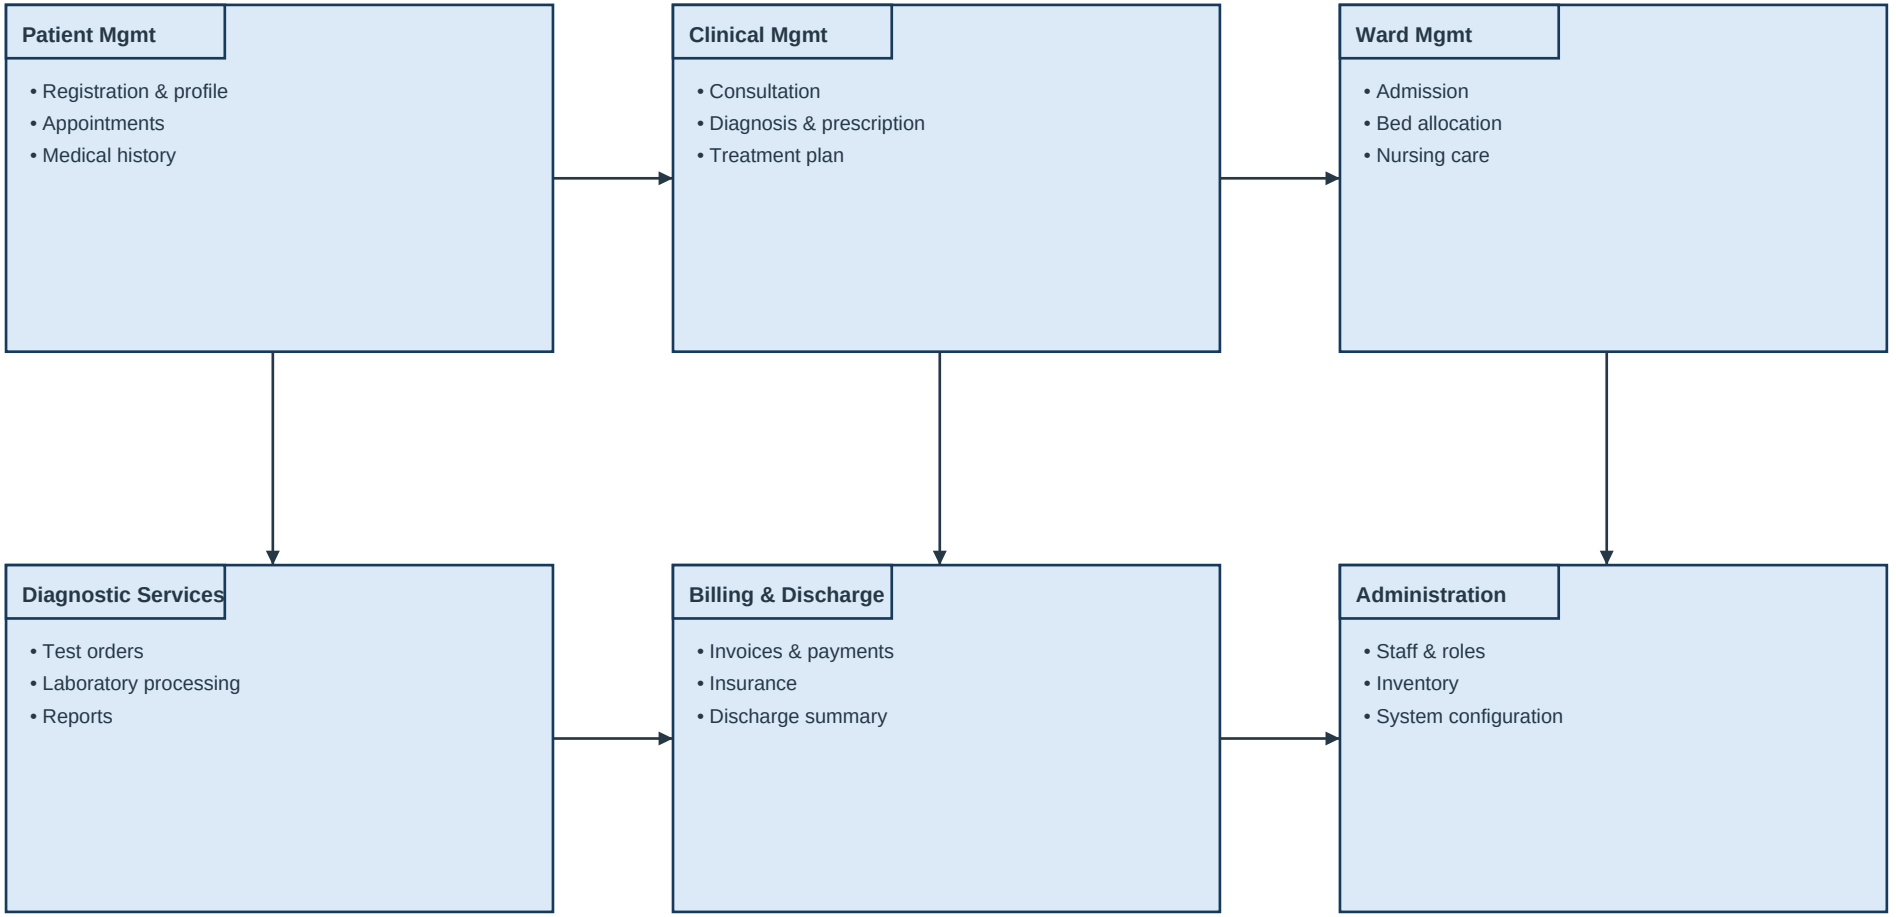

8. ACTIVITY DIAGRAM – TESTS TO PERFORM AND PATIENT DISCHARGE

Test workflow followed by clinical review and discharge decision.

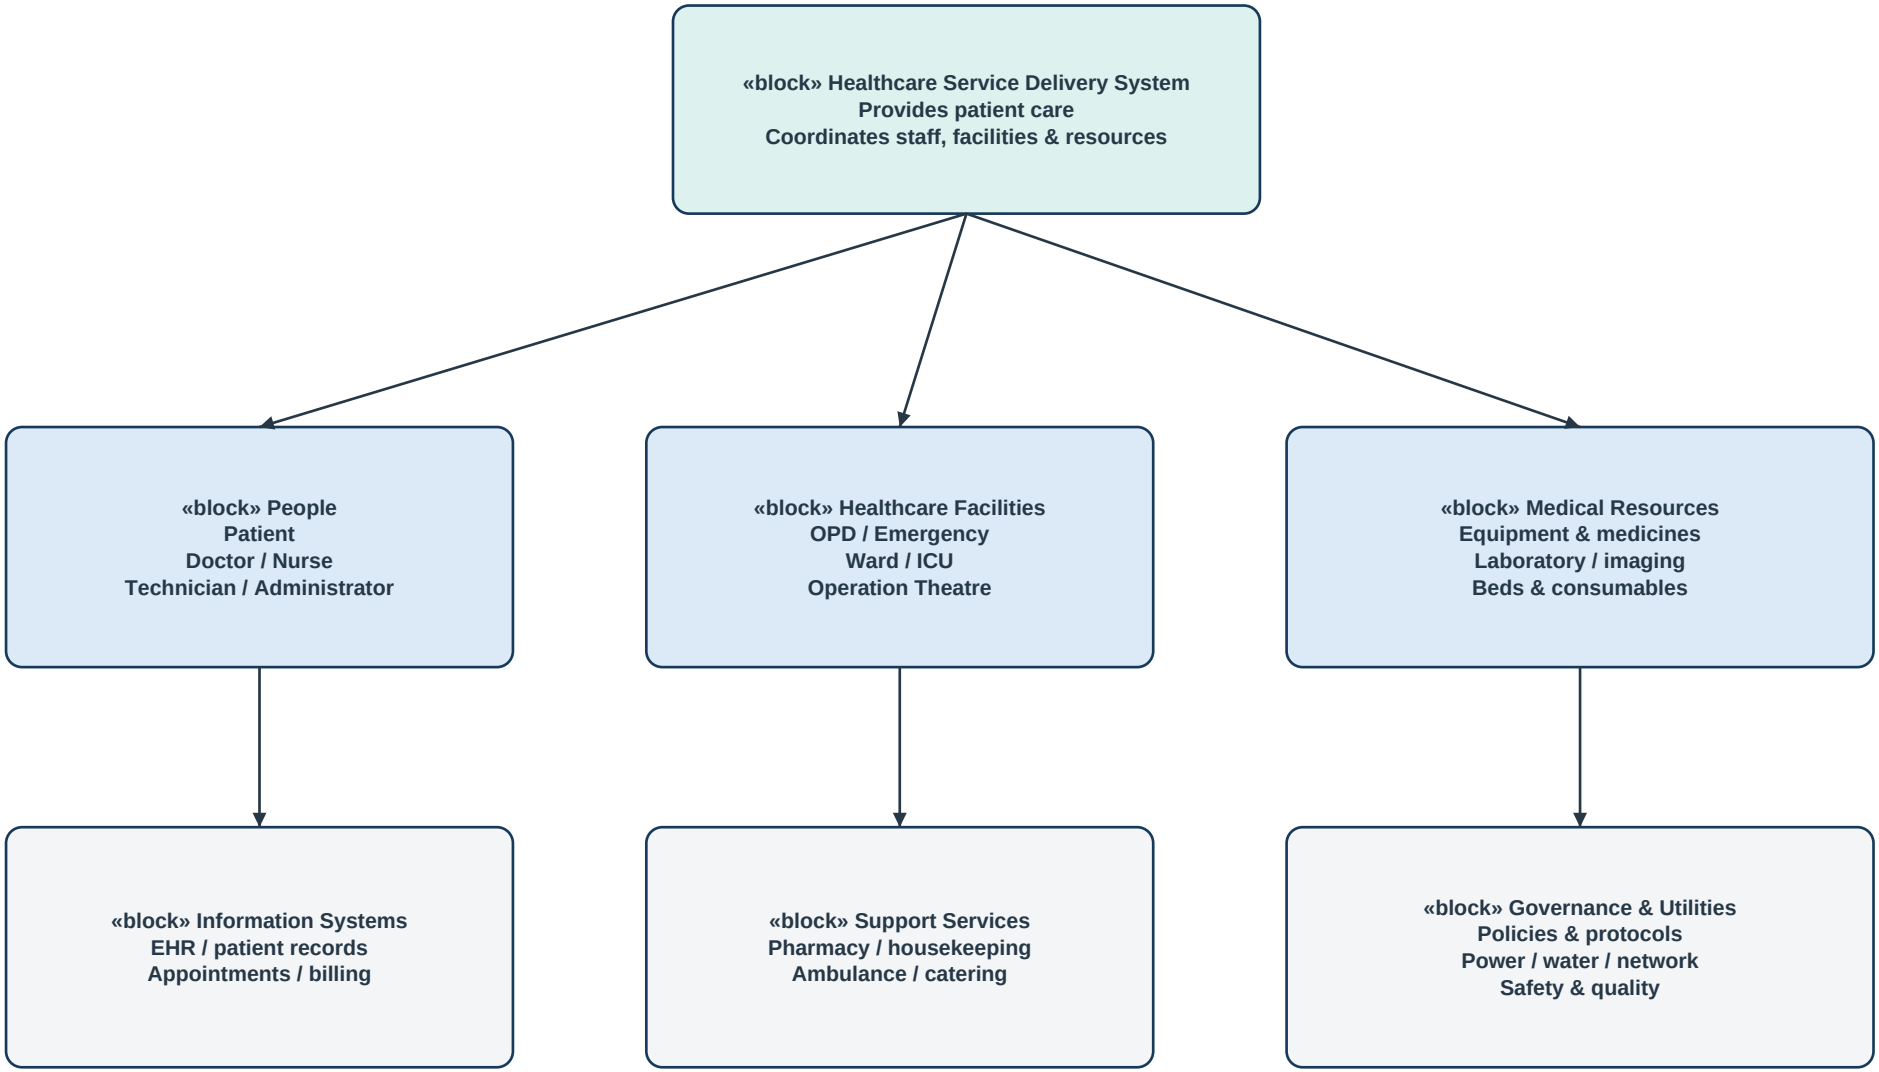

9A. PACKAGE DIAGRAM – HOSPITAL MANAGEMENT SYSTEM

Packages organize related modules; dependency arrows indicate collaboration between packages.

9B. BLOCK DEFINITION DIAGRAM (BDD) – HEALTHCARE SERVICE DELIVERY SYSTEM

SysML-style blocks represent people, facilities, medical resources and supporting services.

Healthcare service delivery depends on coordinated people, facilities, medical resources, information and support services.
